

CORRUGATED PLASTIC

Our product range is manufactured from corrugated polypropylene (PP) sheets and can be produced in thicknesses ranging from 2 to 8 mm and densities ranging from 250 to 3500 gsm. The material can be modified with UV stabilisers, flame retardants (FR) or anti-static additives, depending on the requirements of the application. Surfaces can be customised with screen printing in various colours and sizes, subject to customer

Separators

Comb Separators

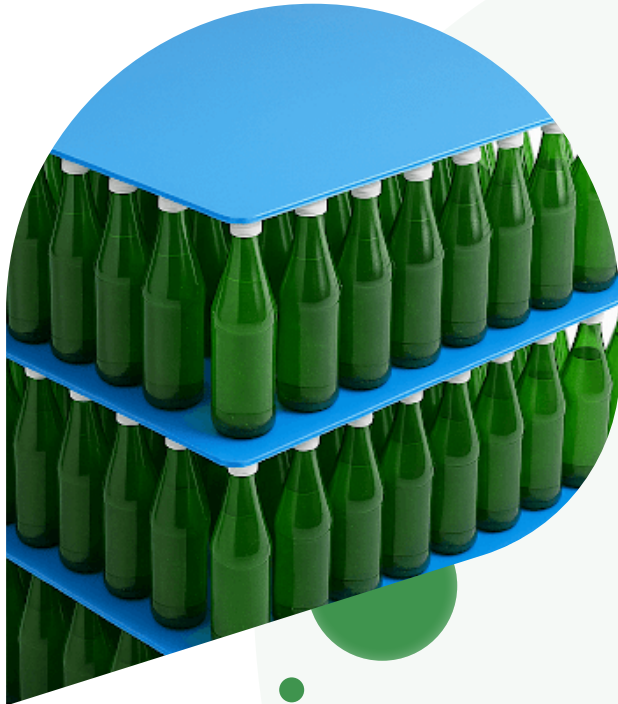

This is a type of separator where the dimensions, thickness and colour—which are frequently used in applications such as inside cabinets and on top of shelves—can be customised to meet sector-specific requirements. It is required in production facilities for white goods, the automotive industry, and spare and electronic

Sheet Separators

These products are frequently used in both domestic and international shipments, particularly within the food and beverage sector, and are designed to prevent damage during the logistics process, whilst offering ease of stacking and the ability to be reused multiple times. The sheets are certified as food-safe (FDA-approved). They are resistant to external factors such as water, dust and moisture, are long-lasting and suitable for recycling.

Pallet Hats

It is used in many sectors to ensure that products, which will remain in transit for a long time, are delivered safely and to ensure that the packaging is suitable for promotional purposes.

FILE BOXES

File boxes are the preferred choice for archiving and stacking documents that require long-term storage, meeting the needs of both the public and private sectors. They can be produced in the required dimensions and modified to include features such as printing, fire resistance or UV resistance.

PET TRANSPORT & ACCOMMODATION

Made from durable polypropylene, our animal shelters provide both a comfortable play area and a secluded, safe living space for our street and domestic pets. Available in various sizes and colours, our models can be customised with optional printing or labelling to suit both corporate and personal use. They are an ideal solution for social responsibility projects, campaigns or as promotional gifts.

CONSTRUCTION INSULATION MATERIALS

It is used in building applications where sound and thermal insulation are required. Products with high insulation properties, particularly those with a thickness of 5–8 mm, are frequently chosen. Our products meeting these specifications are also favoured for outdoor and advertising applications.

ADDITIVE PRODUCTS

This is the process of customising raw materials to meet specific requirements across a wide range of industries.

The most common applications are as follows:

- Anti-static additives
- Electrostatic discharge (ESD) additives
- UV resistance additives
- Flame retardant additives
- Food-contact (FDA-approved) packaging
- Laminated products

HEAVY INDUSTRY PACKAGING

It is used as packaging material in the iron, steel and metal sector. It is preferred for its water and impact resistance. As these products are generally exported abroad, the fact that they are manufactured to be 100% recyclable does not provide an alternative.
